

Our Policy Requests

1. Appeal for state authority to conduct oversight of radioactive waste storage.
2. Revoke California Coastal Commission 2019 Permit No. 9-19-0194, authorizing the dismantling of SONGS, until the canisters in use can be inspected and transported according to Special Condition 19. The spent fuel pools must remain in service.
3. Require utilities to establish funding reserves to cover emergency response to radiation releases for as long as material remains on site.
4. Restrict California Public Utilities Commission (CPUC) decommissioning funds until casks are in use that have verified methods of inspection, monitoring, repair and transportation.
5. Establish independent, real-time monitoring of the environment surrounding the nuclear waste storage facility.

We call for California's leaders to fulfill their duty to protect the residents, environment and economy of California.

California leaders must take action on radioactive waste storage because:

Name: _____

Zip Code: _____
